EXPERIENCE

Mi-Jack Products – Software Engineer

Sept 2018 - Present

- I added new features to the existing customer facing portal application while resolving pre-existing bugs.
- I designed and implemented a data-driven internal application for tracking product manufacturing.
- I'm currently implementing a highly dynamic data-driven service application for product configuration files.
- I created the database design and chose the technical stack for the above mentioned internal service application.
- I worked directly with business and service department stakeholders to develop processes for multiple applications.

Freelance Developer

Jan 2016 - Dec 2017

- I built front-end of a website for a local gym using sass and bootstrap.
- I participated in and facilitated design and user experience meetings.
- I built front-end of an internal reporting app for a local company.
- I worked with company owners to solve business problems.

Automotive Internet Media – Front-End Developer

April 2015 - Nov 2015

- I implemented responsive design on existing Wordpress sites.
- I created custom websites based off designs.
- I took existing sites and implemented custom themes.
- I worked with designers and content creators to create custom website designs.
